Introduction

Bookshelf is a Flutter-based mobile application designed to help readers manage, organize, and track their personal reading journey. With the growing shift towards digital tools, individuals often seek a simple way to categorize books, track reading progress, and build a personalized digital library without relying on complex systems. Bookshelf fulfills this need through an intuitive user interface, clean visual design, and essential features such as searching books, marking their statuses, and viewing reading statistics.

The application focuses on enhancing the reading experience by offering a visually appealing and user-friendly environment. It allows users to explore books using an online search API, save them to a personal library, mark them as read or to-read, and maintain a favorite list. The goal is to make book management seamless, interactive, and efficient for all types of readers.

Problem Statement

Many users struggle to keep track of the books they read, plan to read, or want to save for later. Traditional methods such as notes, diaries, and scattered phone memos often become difficult to manage and lack proper organization. Existing reading apps may require signups, contain complex features, or not be visually appealing, making them overwhelm for basic book tracking needs.

Therefore, there is a clear need for a lightweight, easy-to-use, and visually consistent mobile application that allows users to maintain their personal book collection. Bookshelf addresses this by offering a simple but powerful solution for categorizing books and updating reading progress, all within a clean and minimal Flutter interface.

Objectives

- Provide an intuitive interface to manage books.
- Allow users to search and explore books easily.
- Track reading progress.
- Organize books into categories like Read, To-Read, and Favorites.
- Display statistics for reading habits.

Tools & Technologies

- Flutter Framework
- Dart Language
- Android Studio / VS Code

Key Features

Key Features Implemented:

- Welcome Screen / Onboarding
- Book Search Functionality
- Add to Library / Mark as Read / Add to Favorites
- To-Read Management
- Favorites List
- Completed Books View
- Reading Statistics Dashboard
- Notifications and Status Indicators

Future Work

- Add user login and cloud storage
- Add dark mode
- Add reading timer and reminders
- Add book recommendations

Conclusion

The Bookshelf application successfully achieves its goal of providing readers with a simple, organized, and visually appealing platform to manage their book collections. Through features such as book search, reading status updates, and a clear statistics dashboard, the app enhances the overall reading experience and supports users in maintaining consistent reading habits. Overall, Bookshelf lays a solid foundation for future expansion, making it a promising and scalable solution for personal reading management.
